EVOLUTION CONCEPT MAP

New Species can result in Change Over Time

Natural Selection occurs through the process of means Survival of the Fittest also known as artificial selection such as Dog Breeds

Darwin who was a Naturalist established by EVOLUTION can also occur through which is supported by

Anatomical Evidence

fossil evidence such as

Whale Bones DNA

molecular evidence such as

Vestigial Structures

Homologous Structures

like the legs on a skink like the forelimbs of bats and whales

Shaped Shells

Finches with different beaks

Turtles with different legs on a skink

Galapagos who traveled to the and observed

Such as

Whale Bones

Finches

Turtles

Shaped Shells
