NGSSS	Outline of Content	Targets
<p><b>SC.6.P.13.1:</b> Investigate and describe types of forces including contact forces and forces acting at a distance, such as electrical, <u>magnetic</u>, and gravitational. <b>Cognitive Complexity: Moderate (5-4,5)</b></p> <p><b>SC.6.P.13.3:</b> Investigate and describe that an unbalanced force acting on an object changes its <u>speed</u>, or direction of <u>motion</u>, or both. <b>Cognitive Complexity: Moderate (5-4)</b></p>	<p><b>Unit 5 Lesson 4 (P.13.1, P.13.3)</b>  <u>Introduction to Force</u>                      1. A force is a push or a pull.</p> <p>2. Contact Forces                      A. Friction                      B. Buoyant force                      C. Tension                      D. Compression                      E. Air resistance</p> <p>3. Non-Contact Forces                      A. Electrical force                      B. Magnetic force                      C. Gravity</p> <p><b>Balance and Forces</b>                      1. The net force acting on any object is the combination of all the forces acting on that object.</p> <p><b>Laws of Motion</b>                      1. Isaac Newton developed three laws that, taken together, explain how and why objects move as they do.</p>	<ul style="list-style-type: none"> <li>• Explore how various surfaces affect the friction of pulling an object during an inquiry activity.</li> <li>• Evaluate forces acting on different objects and surfaces during an inquiry activity.</li> <li>• Investigate the friction encountered by a ball rolling across a grassy field and other surfaces during an inquiry activity.</li> <li>• Identify different types of friction and how they play a role in different sports using a graphic organizer.</li> <li>• Interpret how buoyant forces act on vessels and objects on water analyzing a video or images.</li> <li>• Describe and show how electric charges exert forces on each other.</li> <li>• Compare how lightning and static electricity are related.</li> <li>• Describe and illustrate the directional forces of magnets.</li> <li>• Compare and contrast contact and non-contact forces and give examples for each.</li> <li>• Identify friction in everyday situations.</li> <li>• Design an experiment that demonstrates the different properties of gravity.</li> <li>• Describe unbalance forces using a graphic organizer.</li> </ul>
<p><b>SC.6.P.13.2:</b> Explore the <u>law</u> of <u>gravity</u> by recognizing that every object exerts gravitational <u>force</u> on every other object and that the <u>force</u> depends on how much <u>mass</u> the objects have and how far apart they are. <b>Cognitive Complexity: Low (5-5)</b></p>	<p><b>Unit 5 Lesson 5 (P.13.1, P.13.2)</b>  <u>Gravity</u>                      1. Masses attract each other.  <b>Law of Universal Gravitation</b>                      1. Gravity depends on mass and distance.  <b>Orbits</b>                      1. Gravity keeps objects in orbit.</p>	<ul style="list-style-type: none"> <li>• Identify gravity as the force that causes objects to fall to Earth. (II,</li> <li>• Investigate how different spheres fall at different rates due to air resistance during an inquiry activity. (II, III)</li> <li>• Distinguish between air resistance and gravity.</li> </ul>

Quarter: 2

NGSSS	Content	Target
<p><b>SC.6.E.6.1</b> Describe and give examples of ways in which Earth's surface is built up and torn down by physical and chemical weathering, <u>erosion</u>, and <u>deposition</u>. <b>Cognitive Complexity: Moderate (2-1,2,3)</b></p> <p><b>SC.6.E.6.2</b> Recognize that there are a variety of different landforms on Earth's surface such as coastlines, <u>dunes</u>, rivers, mountains, <u>glaciers</u>, <u>deltas</u>, and lakes and relate these landforms as they apply to Florida. <b>Cognitive Complexity: Moderate (2-2,3,4)</b></p>	<p><b><u>Unit 2 Lesson 1 (E.6.1)</u></b>  <b><u>Weathering</u></b>                      1. Weathering is a process that breaks down rock materials.  <b><u>Physical Weathering</u></b>                      1. Physical weathering is the breakdown of rock through motion, force, and other physical processes.  <b><u>Chemical Weathering</u></b>                      1. Chemical weathering is the process by which rocks break down as a result of chemical reactions.</p> <p><b><u>Unit 2 Lesson 2 (E.6.1, E.6.2)</u></b>  <b><u>Erosion and Deposition</u></b>                      1. Erosion and deposition change Earth's surface.                      2. There are several agents that cause erosion and deposition.  <b><u>Erosion and Deposition by Streams</u></b>                      1. These conditions produce faster erosion: faster flow, steeper slopes, greater discharge of water.                      2. These conditions produces faster deposition: slower flow, more shallow slopes, less discharge of water.  <b><u>Formation of Landforms by Streams</u></b>                      1. Some landforms result from stream erosion.                      2. Other landforms result from stream deposition.  <b><u>Erosion and Deposition by Groundwater, Waves, and Currents</u></b>                      1. Groundwater erosion can change the land.                      2. Waves and currents can cause shoreline changes and land formations.</p> <p><b><u>Unit 2 Lesson 3 (E.6.1, E.6.2)</u></b>  <b><u>Erosion and Deposition by Wind</u></b>                      1. Wind causes erosion and deposition.  <b><u>Erosion and Deposition by Ice</u></b>                      1. Ice expands and scrapes land, causing erosion.                      2. Ice pushes along sediment, causing deposition.  <b><u>Erosion and Deposition by Gravity</u></b>                      1. Gravity causes erosion and deposition by pulling down on loose materials.</p>	<ul style="list-style-type: none"> <li>• Compare and contrast physical and chemical weathering during an inquiry activity.</li> <li>• Investigate the role physical weathering plays in shaping/reshaping the earth during an inquiry activity.</li> <li>• Investigate the role chemical weathering plays in shaping/reshaping the earth during an inquiry activity.</li> <li>• Differentiate between erosion and deposition.</li> <li>• Explain how the agents of erosion work.</li> <li>• Provide an explanation of how weathering and erosion helps in the formation of soil shape/reshape earth (landslide).</li> <li>• Investigate local landforms that were developed as a result of erosion and deposition.</li> <li>• Explain how glacial erosion contributes to the formation of large lakes.</li> <li>• Differentiate between the different types of landforms in Florida.</li> </ul>

Quarter: 2

	<p><b><u>Unit 2 Lesson 4 (E.6.2)</u></b> <b><u>Mountains and Glaciers</u></b></p> <ol style="list-style-type: none"><li>1. Mountains are elevated areas that form when Earth's crust deforms.</li><li>2. Glaciers are moving masses of ice that can change the landscape.</li></ol> <p><b><u>Lakes, Rivers, and Deltas</u></b></p> <ol style="list-style-type: none"><li>1. A lake is a body of water surrounded by land.</li><li>2. A river is a wide stream of fresh water that flows into a larger body of water.</li><li>3. A delta is a fan-shaped mass of material deposited at the mouth of a river or stream.</li></ol> <p><b><u>Coastlines and Dunes</u></b></p> <ol style="list-style-type: none"><li>1. Coastlines are the boundary between land and a body of water.</li><li>2. Dunes are mounds of sand deposited by the wind.</li></ol>
